

WANTED

HAVE
YOU SEEN
ME...

BRAIN

WHAT IT LOOKS
LIKE...

It's a slimy, spaghetti
looking, ball type of
mushy- gushy stuff.

A part of the central nervous system, and involves three parts. It sends signals throughout the body, controlling different parts, and also helping with memory.

Located: In the head, protected by a skull

Problems: If there is a malfunction, you will breakdown. You can lose all control and maybe even your life.

WORKS with the nervous system and can control your heart beating (circulatory system), and whether you feel sleepy or awake.

REWARD
